

Andrii Maksymov

Frontend Developer

maksymov.andrew@gmail.com +48883273640 Wrocław, Poland LinkedIn Telegram

Summary

Frontend Developer with 2 years of commercial experience building production-grade UI in **React** and **TypeScript** for a production-scale **iGaming** platform. Delivered **PostHog** analytics instrumentation across registration and deposit funnels, enhanced deposit flow UX with advanced payment states and **alternative payment method fallback**. Strong background in **React** ecosystem, component architecture, and cross-repository development.

Skills

Frontend:

React, TypeScript, JavaScript, Redux, Next.js, WebSockets, HTML5, CSS3, SCSS, TailwindCSS, Storybook, PropTypes, Vite, Webpack, Figma

Testing:

Unit Testing (Jest)

Analytics:

PostHog (Event Tracking / Funnels / User Analytics)

Tools:

Git, GitLab, GitHub, Docker, Azure (Container Apps, CI/CD), Oracle Cloud Infrastructure (OCI), VS Code, WebStorm, ESLint, Prettier, Husky, SonarQube, Postman, PgAdmin 4, Slack, Claude Code, Resend

Experience

TenThousand Remote

Junior Software Engineer June 2024 – May 2026

Responsibilities:

- Developing and maintaining UI features for a production-scale **iGaming** platform using **React**, **TypeScript**, and **SCSS**
- Working with **REST APIs** and **WebSocket** connections for real-time data synchronization
- Writing unit tests with **Jest** and documenting components with **Storybook**
- Contributing to shared internal UI libraries across multiple repositories, publishing packages via **Nexus** registry
- Maintaining code quality standards through **SonarQube** quality gates and **GitLab CI/CD** pipelines
- Participating in code reviews, **Agile** sprint planning and **Kanban** workflows, task estimation, and contributing to internal developer documentation

Achievements:

- Delivered **PostHog** analytics coverage across registration and deposit funnels from scratch, enabling product team to track **10+ key user events** and identify drop-off points for the first time
- Implemented **Google OAuth** and **multi-step registration UI**, ensuring correct post-auth redirects for **100% of sign-in and sign-up scenarios**
- Refactored **mobile scroll architecture** to document-level, unlocking native browser URL bar and navigation bar auto-collapse on scroll, recovering **up to 10%** of visible screen space for mobile users
- Enhanced deposit flow UX with **real-time timers**, advanced payment states, and **alternative payment method fallback** on transaction failures, reducing user drop-off at critical payment steps
- Increased unit test coverage to **~80%** by writing Jest tests across critical frontend components, tracked via **SonarQube**
- Migrated codebase from **~20%** to **~70%** TypeScript coverage and refactored complex components to meet **SonarQube** cognitive complexity gates, unblocking CI pipeline for the team
- Implemented **FreeBet** display logic and availability states within the betting interface, integrated with real-time **WebSocket** state updates
